```python
# import
library
                import math, random

                # function to generate OTP
                def generateOTP() :

                    # Declare a digits variable
                    # which stores all digits
                    digits = "0123456789"
                    OTP = ""

                  # length of password can be changed
                  # by changing value in range
                   for i in range(4) :
                        OTP += digits[math.floor(random.random() *
10)]

                    return OTP

                # Driver code
                if __name__ == "__main__" :

                    print("OTP of 4 digits:", generateOTP())
```
